

WELL EXAMINER

Technical Assessment

Well Examiner is designed for companies involved in the well delivery process who require an independent PEER review of an activity plan, a system/process or an organization at defined project milestones. Well Examiner is equally suited as part of an incident investigation process or a review after a completed operation.

What we do

- Appoint a team of highly competent and independent individuals
- Examine the documents against regulatory requirements, standards, the Client's internal requirements and best practices
- Conduct interviews with the involved personnel
- Issue findings and observations with criticality ranking
- Suggest alternative solutions

What we examine

- Well design documents
- Well activity programs
- Emergency response plans
- Consent applications
- Management system
- "See to duty" functions
- HSEQ plans and procedures
- Cost estimates

“ The responsible party shall determine the need for and scope of verifications, as well as the verification method and its degree of independence, to document compliance with requirements in health, safety and environmental legislation. When verifications are deemed necessary, they shall be carried out according to a comprehensive and unambiguous verification programme and verification basis. ”

PSA's Framework Regulations, Section 19
